

Hari Vats, Space Education and Research Foundation, Ahmedabad

I participated in the site selection workshop for GMRT at RRI Bangalore. Three sites were under consideration: (1) Near Bangalore, (2) Near Pune (present location of GMRT) and (3) Near Indore. I made a short presentation on comparative study of three sites from ionospheric scintillation point of view, This study showed that the site near Bangalore will have maximum effect of ionospheric because of proximity to Geomagnetic Equator where site near Indore will also have more scintillation because of proximity to equatorial anomaly region. Pune (present site of GMRT) will have least effect of ionospheric scintillation. Late Prof Govind Swarup announced that this is very logical and clear presentation about the comparative study of ionospheric scintillation at three sites under consideration at that time.
